PROFESSIONAL SUMMARY

Enthusiastic Software Developer graduated with Digital Media and IT Diploma (4.0 GPA). Skilled in full-stack development, specializing in React, ASP.NET, and Flutter. Demonstrated success in performance optimization and automated testing implementation and creating responsive user interfaces.

TECHNICAL Qualifications:

I possess hands-on experience in multiple programming languages such as C#, JavaScript, Dart, and SQL. My frontend development skills include React, Next.js, Blazor, and Flutter, complemented by strong fundamentals in HTML5 and CSS3.

For backend development, I specialize in ASP.NET and Node.js, with expertise in designing and implementing RESTful APIs.

I have extensive experience working with MSSQL Server and PostgreSQL databases, alongside cloud platforms like Firebase, Supabase, and Digital Ocean.

My technical toolkit includes Docker for containerization, GitHub for version control, and proficiency in BI tools (SSAS, SSIS, SSRS).

I enhance my technical abilities with strong soft skills in problem-solving, adaptability, and time management. Additionally, I also have proficiency in MS Office, and fluency in English, Punjabi, and Hindi.

Currently learning Python, and Three.js and Blender for 3D Modelling.

EDUCATION

January 2023- December 2024	DMIT: Computer Software Dev. Diploma , Northern Alberta Institute of Technology (NAIT) - Edmonton, ALBERTA Graduated with 4.0 CGPA and Dean's honor roll.
2021	High School Diploma CBSE , Shemrock Sen. Sec. School – Mohali, Punjab, INDIA

PROJECTS/EXPERIENCE:

September-December 2024	Full Stack Developer, DMIT CSD Capstone - Architected and developed a comprehensive supply chain management system with 10+ dynamic React pages and PostgreSQL database on Supabase. - Engineered secure user authentication using JWT tokenization, RBAC implementation, and 2FA via TWILIO API integration - Designed and optimized database schema using PostgreSQL, creating efficient data pipelines between backend and frontend - Implemented advanced features including multi-category product management, chain of custody tracking, and bulk data parsing capabilities - Enhanced security with OTP-based password recovery system and role-based access controls - Streamlined deployment process using Digital Ocean, including custom domain configuration and SSL setup - Delivered project ahead of schedule meeting all requirements earning an A+ grade
----------------------------	--

January 2025 – present

Frontend Developer & 3D Artist - Interactive 3D Portfolio, *Personal Project*

- <https://mixtape-lab.vercel.app/>
 - Designed and developed an immersive 3D portfolio website featuring dynamic environment interactions and real-time animations using Three.js and React
 - Engineered responsive camera control system with dual modes (free orbit/tracking) and physics-based parallax effects for natural user interaction
 - Implemented complex scene management including floating island dynamics, portal transitions, and GLB model optimization for web
 - Integrated real-time clock display and interactive UI elements with dynamic text effects using CSS animations and React state management
 - Optimized 3D rendering performance achieving 60 FPS through geometry instancing, LOD techniques, and WebGL shader optimization
 - Deployed with CI/CD pipeline on Vercel including automated performance testing and Lighthouse score optimization
 - Enhanced user engagement through particle systems, fog effects, and contextual help system to increase visitor interaction time.
- Tech Stack: React, Three.js, Next.js, React Three Fiber, GLSL, WebGL, Vercel, Framer Motion
